A friend of mine is owner of a shortwave reciever (Lo 6K 39a) from times of
the old "German Wehrmacht". It still seems to function.
Who can give further information about this equipment and it's today market
value.

To: ham-equip@ucsd.edu

I am looking for a source of telescoping antenna masts in the 25 to 35 foot range.

I have seen them at hamfests and I can kick myself for not having bought one then.

I have seen a couple of different types, they all seem to be surplus, have either a mechanical or hydraulic means of raising and sell for \$100-\$150 in good condition. The bottom sections are around 5" in diameter and the tops are 2" in diameter.

I need one to support a 144 & 432 Mhz quad and a 6M X-Beam.

If anyone knows where I can find one please let me know.

The sequence for tone scan is: 'FM'>'TSet/2' then press and hold 'MHz/^' or 'MHz/v' for about a second.

Make sure you have Tone turned on: 'FM'>'Tone/1'
